

ENERGY CONCEPT

All the **energy** needed **to run the hotel** is obtained 100% from Tiroler Wasserkraft AG with the help of state-of-the-art technology such as groundwater heat pumps, heat exchangers, waste heat utilisation, power consumption monitoring, etc

95% of our **energy** is from CO₂-free, renewable and nuclear-free sources

To save valuable **energy**, our outdoor swimming **pool** is covered in the evening or after closing time in the cold months

We wash all our **laundry** in our own laundry to conserve resources and save long transport routes

Drinking water is used intelligently. A maximum of 9 litres per minute flow out of our taps. This saves energy for hot water preparation

The **drinking water** is directly from the Pinnis spring and refined with the Grander original information

There are no fluorescent **lamps** and energy-saving lamps, as 100 % of the light sources are LED

There are **no air conditioning** units in the entire building
