

## SUSTAINABILITY AT THE HOTEL

To **reduce the detergent load**, we only change the towels when they are in the bath or shower. The bed linen is only changed when the bag provided is next to your bed, on the bed

The **accessories in the bathroom** are for your stay. These are packed in a compostable environmental film

To **reduce disposable packaging**, we use soap dispensers, which are placed in the shower and at the washbasins, and body lotion in dispensers

**Rubbish, paper, plastic, glass, metal, organic and residual waste** are properly separated and disposed of accordingly. In the rooms, plastic, beverage containers and paper are placed in a container. Residual waste is collected in the bathroom by means of a lockable pedal bin

As the **1st hotel in North Tyrol**, the hotel garden and the herb farm garden were honoured with the „**Nature in the Garden**“ award. A nature garden stands for ecological design and sustainable cultivation. We do not use synthetic chemical pesticides, fertilisers or peat. Only pesticides that comply with the EU organic regulation or the criteria of the "Nature in the Garden" seal of quality are permitted

The **garden waste** produced, such as grass, tree and shrub cuttings, is composted on our own farm

The **outdoor facilities** such as green areas, planting, paths within the complex are kept and maintained very naturally

For the correct dosing of **cleaning agents**, dosing systems are used in the laundry room and the sink

We only use **portion packs** to a very limited extent, e.g. for gluten-free foods

All **meals** are freshly prepared, minimising food waste. Our kitchen waste is collected separately and composted for biogas production

**Waste** with dangerous ingredients only occurs in normal household quantities and can be taken to the dealer or to the collection of used materials

The **old bread** is used to feed our fallow deer

For **beverages**, we have a predominant use of reusable containers

In order to act in a climate- and resource-friendly way, we try to avoid **disposable products**

As an environmental company, we use **office paper** with an eco-label with ISO Type I certification. Where possible, we use recycled paper. Our internal and external communication is paperless as far as possible

**Empty cartridges** for the toners are returned to the supplier
